

User Manual

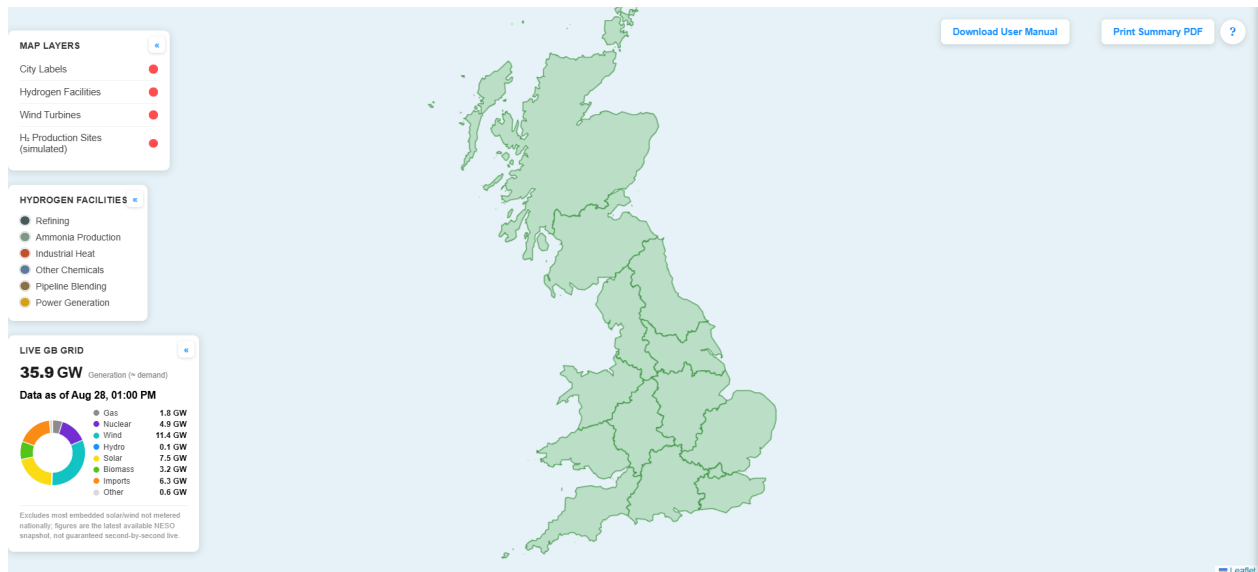

A guide to the UK Wind & Hydrogen Dashboard

Updated 27 August 2026

This guide walks through every part of the site — the main map, each region's data sections, the markers you can see and interact with, and how to export data. Screenshots throughout are placeholders, to be replaced with real images.

1. Main Hub

This is what you see when the site first loads — an interactive map of Great Britain, divided into 14 regions. Click any region to zoom in and open its data panel.

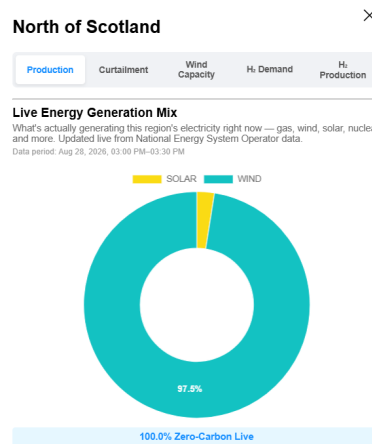

Around the map

- Map Layers panel (top-left)**
 Toggle City Labels, Hydrogen Facilities, Wind Turbines, and simulated H₂ Production Sites on or off.
- Hydrogen Facilities Legend**
 Explains what each facility marker's colour and shape mean.
- Live GB Grid widget**
 A live, national snapshot of what's generating Great Britain's electricity right now.
- Collapse arrows (⏏)**
 Each left-side panel can be tucked away and brought back with the same button.
- ? button (top-right)**
 Opens the About This Site panel — who built it, why, and where the data comes from.
- Export buttons (top-right)**
 Download this User Manual, or generate the full data Summary PDF covering every region.

2. Region Sidebar

Clicking a region zooms the map in and opens a sidebar with several data sections, called up using the tabs at the top.

Sidebar sections

- **Generation Mix**

Live breakdown of what's generating this region's electricity right now.

- **Curtailment**

Wind power switched off due to grid limits or technical problems. Daily, Monthly, Yearly, and Total views.

- **Wind Capacity**

Installed wind capacity over time, plus an estimate of near-term growth.

- **H₂ Demand**

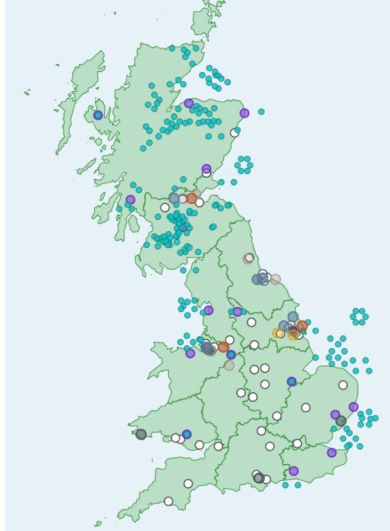

Real UK hydrogen demand by sector, estimated down to regions based on historic demand data from industrial processes. Some sectors weren't estimated as they had no relevant data to base an estimate on.

- **H₂ Production**

A simulation: how much hydrogen could be made from this region's curtailed wind. This simulation is based on previous work, there is more information available in the about section located on the top right about the original work.

3. Map Markers

Several marker types can be switched on from the Map Layers panel. Hover over any marker to see details in a popup.

Marker types

- **Wind Turbines**

Real UK wind farms depicted with little blue dots on the map. Hovering shows the farm's name.

- **Hydrogen Facilities**

Real refineries, chemical plants, and other hydrogen-using sites. Displayed in many colors and operational conditions, types can be seen from the facility legend widget on the left of the main hub.

- **H2 Production Sites**

Simulated electrolyser hubs, named after the real substation for which the relevant wind clusters for that region connect through. Not real installations, just simulations. Depicted as full purple circles on the map.

- **City Labels**

Reference points to help orient the map and for the user's convenience. Depicted as full white circles.

4. Exporting & Learning More

Print Summary PDF

Generates a full data report: a national summary, then every region with its own map, generation mix, curtailment trend, and data tables. Takes a little time to load for the first time if it's your first time coming onto the site because of the sheer data it downloads.

About This Site

Opens from the ? button. Covers why the site was built, credits, and exactly where every dataset comes from. Also provides more data on previous research related to the site, has acknowledgements, and a link for donations.

This User Manual

This document. Available any time from the button next to Print Summary PDF.
